                                                                                                                                                                                               밁
                                                                                                                                                                                                                                                                                                                                                 The polypeptide is prepd. by genetic engineering of genes encoding the P. falciparum circumsporozoite (CS) protein [Dame et al., Science 225: 593 (1984)], and the influenza virus non-structural CS protein 1 (NS1), [Baez et al., Nucleic Acids Research, 8: 5845 (1980)]. The DNA encoding the 1st 81 AAs of the N-terminal of NS1 (NS1,81) is linked via a synthetic sequence to DNA encoding Region I conty, flanking region less the 18 AA signal region. This is linked to a synthetic sequence encoding two repeat units from the immunodominant region, which in turn is fused to DNA encoding Region II-conty. flanking region. The Pro residue separating the Region II-conty CS flanking region is an artifact of a filled-in BamHI site; the Gly separating the repeat units and the Region II-conty. CS flanking region is an artifact of a filled-in BamHI site; the Gly separating the repeat units and the Region II-conty. CS flanking region is an artifact of a synthetic FokI/TthIII I linker. The peptide can be used in a vaccine for protection against malaria.
                                                                                                                                                                                                                                                                  Query Match

The polypeptide is prepd. by genetic engineering of genes encoding the P. falciparum circumsporozoite (CS) protein [Dame et al., Science 225: 593 (1984)], and the influenza virus non-structural protein [NSI], [Baez et al., Nucleic Acids Research, 8: 5845 (1980)]. The DNA encoding the 1st 81 AAs of the N-terminal of NS1 (NSI_81) is linked to a synthetic sequence encoding four repeat units from the immunodominant region, which in turn is linked via a synthetic sequence to DNA encoding Region I contg. flanking region less the 18 AA signal region. This is linked to DNA encoding Region II-contg. flanking region. The Pro residue separating the Asp (at the C-terminal of the linker) from the Region II-contg. CS flanking region is an artifact of a filled-in BamHI region is an artifact of a synthetic FoklyThIII I linker. The peptide can be used in a vaccine for protection against malaria.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Key

  밁
The polypeptide is prepd. by genetic engineering of genes encoding the P. falciparum circumsporozolte (CS) protein [Dame et al., Science 225: 593 (1984)], and the influenza virus non-structural protein 1 (NS1), [Baez et al., Nucleic Acids Research, 8: 5845 (1980)]. The DNA encoding the 1st 81 AAs of the N-terminal of NS1 (NS1_81) is linked to a synthetic sequence encoding four repeat units (the variant form) from the immunodominant region, which in turn is linked via a synthetic sequence to DNA encoding Region I
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Key

         Novel recombinant protein as vaccine for treating malarial infection comprises antigenic peptides obtained from different stages of plasmodium falciparum life cycle -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           contg. flanking region less the 18 AA signal region. This is linked to DNA encoding Region II-contg. flanking region. The Proresidue separating the Asp (at the C-terminal of the linker) from the Region I-contg. CS flanking region is an artifact of a filled-the Region I step: the Gly separating the Region I and II-contg. CS flanking regions is an artifact of a synthetic Fokk/TthIII I flanking regions is an artifact of a synthetic Fokk/TthIII I linker. The peptide can be used in a vaccine for protection

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present sequence is that of recombinant protein CDC/NIIMALVAC-1, which is a multivalent, multistage malarial vaccine. The recombinant protein comprises, melittin signal peptide, (His)6 tag, T-cell epitope from tetanus toxoid and 21 antigenic epitopes from circumsporozoite from tetanus toxoid and 21 antigenic epitopes from circumsporozoite protein (CSP), sporozoite surface protein-2 (SSP-2), liver stage protein-1 (LSA-1), merozoite surface protein-1 (MSP-1), MSP-2, apical antigen-1 (AMA-1), erythrocyte binding antigen-175 (EBA-175), membrane antigen-1 (AMA-1), erythrocyte binding antigen-175 (EBA-175), rhoptry associated protein-1 (RAP-1) and gamete specific antigen, Fig27. These epitopes were obtained at different stages of the life cycle of plasmodium falciparum. CDC/NIIMALVAC-1 vaccine has antiparasitic activity and can used for treatment and prevention of malarial antiparamia. The color of the c

A recombinant DNA molecule is claimed, comprising functional DNA coding sequence fused, in phase, to a portion of the Pre-S2 region of a hepatitis B virus (HBV) in phase, to a portion of the Pre-S2 region of a hepatitis B virus (HBV) in phase, to a portion of the Pre-S2 region of a hepatitis B virus (HBV) comprises the Pre-S2 coding sequence. The functional DNA coding sequence comprises the Pre-S2 coding sequence, the CS protein coding sequence of Pre-S1-Pre-S2 coding sequence, the CS protein coding sequence of Plasmodium, or a HIV coding sequence such as an HIV envelope gene sequence, e.g. HIV C7 protein coding region, HIV peptide 121 coding region, or HIV Dreesman peptide coding region.

                     The plasmodium CS gene was used to isolate peptides capable of inducing an immune response to the parasite. Peptide antigens be synthesised in pure form and used to generate an immune response in vaccination against malaria. The featured repeat units are claimed and must be present in copies of 2-1000.
                                                                                                                        New immunologically active pure synthetic peptide(s) - protection against infection by malaria parasite.

the cloning procedure used to construct the hybrid gene, a stretch of 189 amino acids representing amino acids 210 to 398 of the circumsporozoite protien (CSP) of Plasmodium falciparum strain 768, an amino acid Arg created by the cloning procedure, four amino acids, pro-Val-Thr-Asn, representing the four carboxy terminal residues of hepatitis B virus (HBV), adw serotype, pre52 protein, and a stretch of 226 amino acids specifying the S protein of HBV, adw serotype.
                                                                           This sequence represents the RTS hybrid protein which is encoded by the RTS expression cassette. This hybrid consistits of a methionine residue derived from S. cerevisiae TDH3 gene sequence, three amino acids, Met-Ala-Pro, derived from a nucleotide sequence created by

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This protein, and RTS* (see also AAR37797), may be combined with an adjuvant and used in a vaccine for preventing plasmodium infections. The vaccines produce a humoral response and also a cellular immune.

This protein, and RTS (see also ARR37796), may be combined with an adjuvant and used in a vaccine for preventing plasmodium infections. The vaccines produce a humoral response and also a cellular immune

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             δÃ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         cc lambda mPf1 encoding the complete CS protein gene P. falciparum into CC vector pUC8. A recombinant DNA vector is claimed, which comprises a DNA CC sequence contg. the coding sequence of the CS p. falciparum operatively CC linked to an expression control sequence. Prefd. expression control control sequences include the yeast glyceraldehyde-3p-dehydrogenase gene (TDH3) CC promoter and the yeast ornithine carbamoyl transferase gene (ARG3) CC transcription termination region. A suitable coding sequence comprises comprises the 1215bp Stul-Ssal fragment of WR201 contg. the P. falciparum CS protein coding sequence, minus its first 50bp. Also claimed is a cc transformed host cell, a method of culturing the cell to produce CS, the protein, and a vaccine. The vector comprises a 192 bp Sau3A fragment cc containing for 16 tetrapeptide repeats of the P. falciparum CS protein cc containing the P. falciparum CS protein coding sequence minus cc sports. Its first 50 bp. or two, three, four or more tandem copies of court comprises code containing the P. falciparum CS protein coding sequence minus cc sports.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Matches
                                                                                          AAR82571-91 are helper T cell epitopes which can be used in the preparation of a peptide immunogen that is useful in vaccines for treating allergic reactions. In the immunogen an IgE CH4 peptide is attached C-terminally to a series of amino acids including a helper T cell epitope. The immunogen may also opt. contain a fatty acid or fatty acid derivative, an invasin domain or alpha-NH2. The immunogen produces high titres of antibodies to the effector site in human IgE heavy chain (the CH4 domain peptide) which inhibit mast cell activation and reduce allergen-induced IgE prodn. The immunogens may be used in either a radially branching multimeric form or a linearly arranged monomeric form.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           of the native protein's Cys residues at positions 384 and 389. Also claimed is AAP91504 (or modified forms, see FT) associated with an antigenic structure representing a B-cell epitope, pref. a multiple antigenic peptide, esp. multimers of the repeat sequences NANP present in P. falciparum CS protein.
                                                                                                                                                                                                                                                                         Claim 3; Page 23; 87pp; English.

                    Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Score
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              seq
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Issued_Patents_AA:*

circumsporozoite protein precursor - Plasmodium cynomolgi (strain Gombak)

N;Alternate names: major sporozoite surface antigen

C;Specles: plasmodium cynomolgi

C;Date: 30-Sep-1987 #sequence_revision 30-Sep-1987 #text_change 07-Nov-1997

C;Accession: E26255

R;Galinski, M.R.; Arnot, D.E.; Cochrane, A.H.; Barnwell, J.W.; Nussenzweig, R.S.; Enea,

Cell 48, 311-319, 1987

A;Title: The circumsporozoite gene of the Plasmodium cynomolgi complex.

A;Reference number: A90889; MUID:87102878

A;Accession: E26255

A;Molecule type: DNA

A;Residues: 1-401 GGAL>
C;Comment: There are three distinct regions in the mature circumsporozoite protein, the obic membrane-anchoring sequence.

C;Comment: There are 17 tandem copies of the 11-residue repeat D/G-G-A-A-A-G-G-G-N.
C;Superfamily: circumsporozoite protein; thrombospondin type 1 repeat homology

C;Reywords: sporozoite; surface antigen; tandem repeat

F;1-19/Domain: signal sequence #status predicted <SIG>
F;20-401/Froduct: circumsporozoite protein #status predicted <MAT>
F;98-278/Region: 11-residue repeats

F;326-379/Domain: thrombospondin type 1 repeat homology <THR1>

      Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Score

MONDAL J., Ortega Perez R., Turian G.;

MOLECULar cloning and expression studies of two divergent alpha-tubulin genes in Neurospora crassa.";

PEMS Microbiol. Lett. 150:33-41(1997);

-1- FUNCTION: TUBULIN IS THE MAJOR CONSTITUENT OF MICROTUBULES.

BINDS TWO MOLES OF GTP, ONE AT AN EXCHANGEABLE SITE ON THE BLOHAL SITE ON THE ALPHA-CHAIN.

CHAIN AND ONE AT A NONEXCHANGEABLE SITE ON THE ALPHA-CHAIN.

-1- SUBUNIT: DIMER OF ALPHA AND BETA CHAINS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          entities

Biophys. Acta 1352:63-72(1997).
FUNCTION: CONTROL OF TOPOLOGICAL STATES OF DNA BY BREAKAGE AND SUBSEQUENT REJOINING OF DNA STRANDS. MAKES DOUBLE-STRAND BREAKS (BY SIMILARITY).
CATALYTIC ACTIVITY: ATP-DEPENDENT BREAKAGE, PASSAG OF DOUBLE-STRANDED DNA.
SUBUNIT: HOMODIMER (BY SIMILARITY).

Biol. 14:6306-6316(1994).

FUNCTION: TRANS-ACTING FACTOR IN THE REGULATION OF TRANSCRIPTION AND IN DNA REPLICATION. INVOLVED IN THE TRANSCRIPTION ACTIVATION OF A SUBSET OF RIBOSOWAL PROTEINS GENES. BINDS THE ARS-ELEMENTS FOUND IN MANY PROMOTERS. BINDS TO THE SEQUENCE 5'-TCN(7)ACG-3'.

SUBCELLULAR LOCATION: NUCLEAR.

PUM: EXTENSIVELY PHOSPHORYLATED ON SER AND THR RESIDUES.

SIMILARITY: STRONG TO KLUYVEROMYCES ABF1, AND LOCAL TO YEAST RAP
